

RADARS® SYSTEM 12TH ANNUAL SCIENTIFIC MEETING

Evolution of the Opioid Overdose Epidemic

RADARS® SYSTEM INTERNATIONAL PRE-SYMPOSIUM

International Landscape of Prescription Medication Misuse

WELCOME

- **The Global Mosaic: Is Prescription Drug Misuse Really Different Among Countries?**
 - Janetta Iwanicki, MD
 - *Associate Medical Director – RADARS[®], Rocky Mountain Poison and Drug Center, Denver Health and Hospital Authority*
- **The Growing Nexus Between NARCOS and Counterfeit Medicines**
 - J. Aaron Graham
 - *Executive Director - Brand Safety & Security, Boehringer Ingelheim Pharmaceuticals, Inc.*
 - John J. Burke
 - *President, Pharmaceutical Diversion Education Inc., President and Co-Founder, International Health Facility Diversion Association*

WELCOME

- **Acute Harms of Prescription Drug Misuse: What Can We Learn from the European Drug Emergencies Network (EuroDEN) Plus Project**
 - David Wood, MD
 - *Consultant Physician and Clinical Toxicologist, Guy's and St Thomas' NHS Foundation Trust and King's Health Partners Reader in Clinical Toxicology, King's College London*
- **Understanding the Evolution of the Opioid Epidemic in Canada, and the Risks of Poly-Substance Use**
 - Tara Gomes, PhD
 - *Scientist, St. Michael's Hospital*
- **Panel Discussion**
- **Networking Welcome Reception**

The Global Mosaic: Is Prescription Drug Misuse Really Different Among Countries?

Janetta Iwanicki, MD

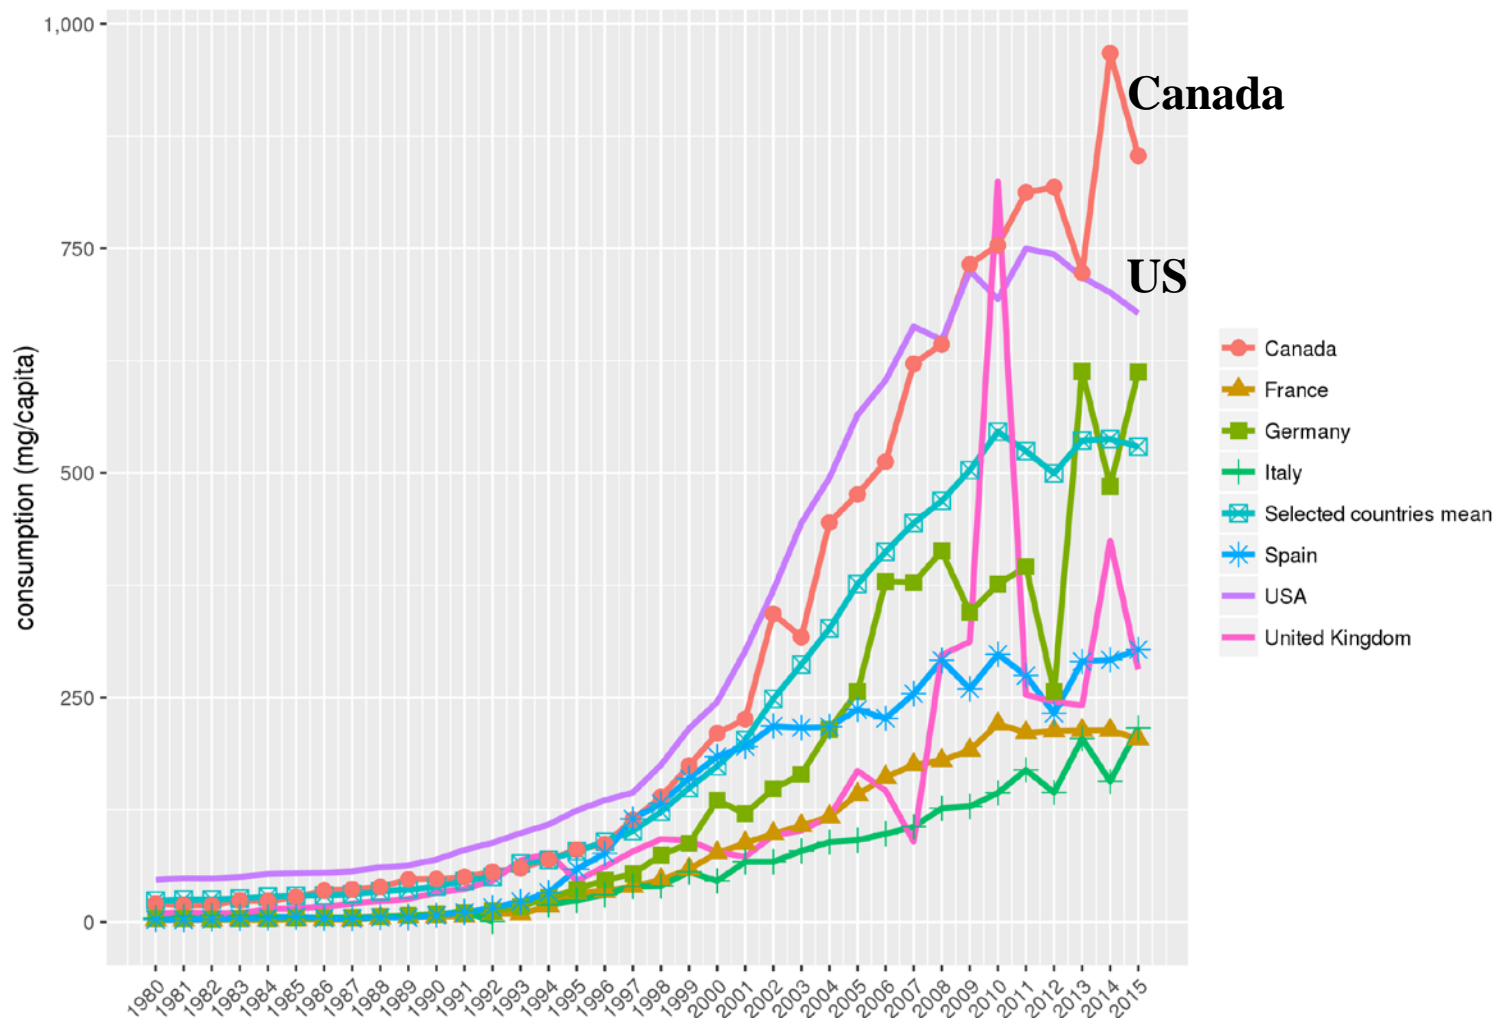

***RADARS[®], Rocky Mountain Poison and Drug Center, Denver
Health and Hospital Authority***

The Global Mosaic: Can We Compare Apples and Oranges?

- **Prescription medications vary widely across countries**
 - Prescribing patterns
 - Medication availability
 - Cultural and social trends
- **Each country measures the impacts of nonmedical use differently**
 - Nationwide surveys
 - National databases
- **How can we transition to comparing apples to apples?**

RADARS® International Program Development

- **2007:** Global Toxicosurveillance Network (GTNet) Program
- **2012:** StreetRx (CA)
- **2012:** EUROPAD
- **2013:** StreetRx (UK, EU)
- **2014:** Survey of Non-Medical Use of Prescription Drugs (UK)
- **2014:** Web Monitoring
- **2015:** SKIP (CA)
- **2014:** Drug Diversion (CA)
- **2016:** Survey of Non-Medical Use of Prescription Drugs (US, CA)
- **2017:** Survey of Non-Medical Use of Prescription Drugs (EU)
- **2018:** Canadian Poison Centre Network (CA)

RADARS® International Program: Canadian Consumer Products & Pharmaceutical Safety, Inc.

RADARS[®] International Program: European Mosaic

Canadian Poison Centre Network and Global Toxicosurveillance Network (GTNet)

▶ Methodology

- Standardized data are collected during routine daily management of acute medical events then queried for cases involving drugs of interest

Key Measures

Date of event

Demographics (gender, age, postal code)

Reason for exposures (e.g. intentional abuse, misuse, unintentional, suicide)

Drugs/drug products involved in the exposure (product-specific)

Routes of abuse

Outcome (e.g. death)

Global Mosaic: GTNet, France

Exposures per 100,000 Population

There were no reports of hydromorphone and oxymorphone during the surveillance period

Global Mosaic: GTNet, Germany Exposures per 100,000 Population

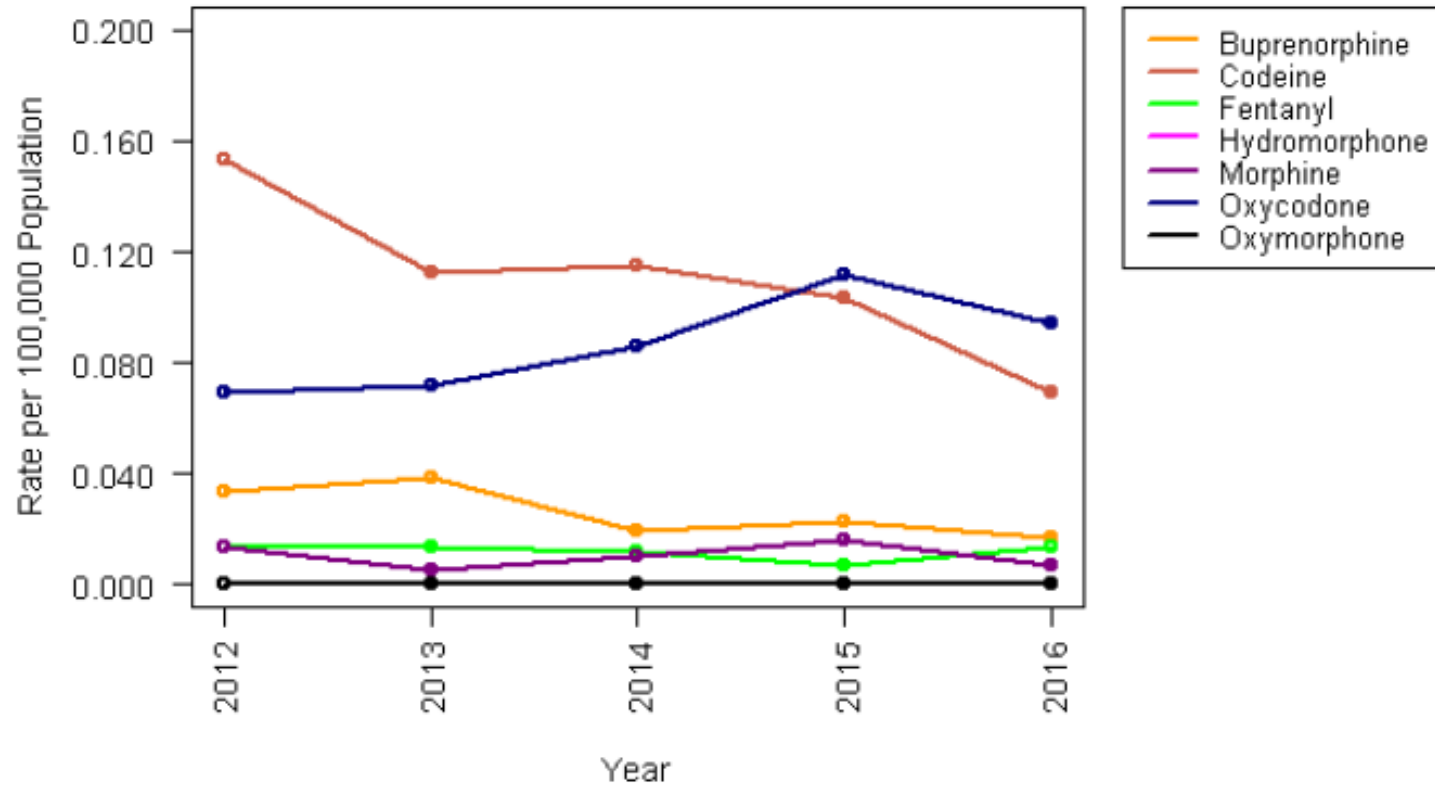

There were no reports of hydromorphone and oxymorphone during the surveillance period

Global Mosaic: GTNet, Italy

Exposures per 100,000 Population

There were no reports of hydromorphone or oxymorphone during the surveillance period

Global Mosaic: GTNet, UK

Exposures per 100,000 Population

There were no reports of oxymorphone during the surveillance period

Canadian Opioid Dependence Treatment and European Opioid Treatment Patient Survey Program (EUROPAD)

▶ Methodology

- Patients entering treatment for opioid addiction are asked to voluntarily complete the questionnaire
- Questionnaires are sent to central data coordination site for quality review and data entry

Key Measures

Gender, age, substance abuse treatment history, primary drug used “to get high,” source of primary drug acquisition and routes of abuse

Endorsement of prescription drugs “to get high” in the past 30 or 90 days (product-specific)

Route of abuse (chewed, snorted, smoked, injected)

Opioid Dependence Treatment Program, Canada

Quarterly Rates per 100,000 Population

Opioid Dependence Treatment Program, Canada

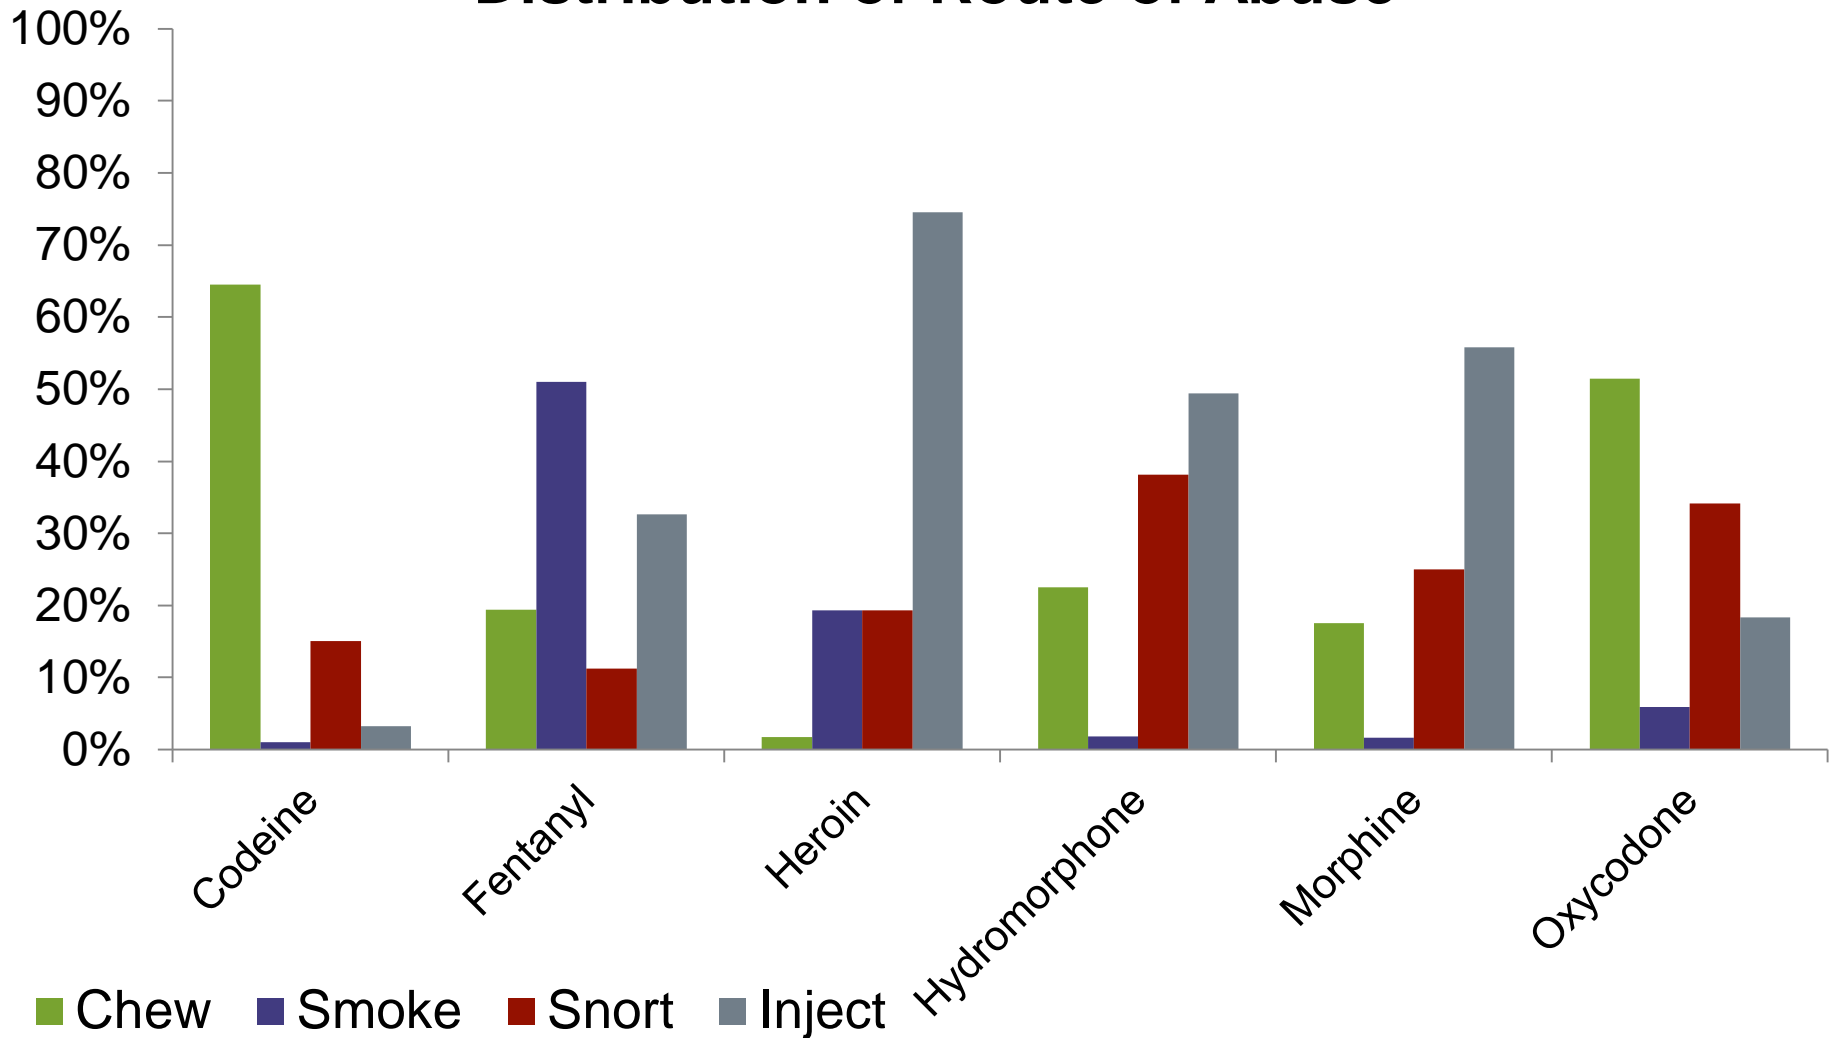

Cumulative Rates per 100,000 Population

Opioid Dependence Treatment Program, Canada

Routes of Opioid Misuse

Distribution of Route of Abuse

EUROPAD, GABA Analogues

EUROPAD, GABA Analogues & Polysubstance Misuse

StreetRx Program

<http://streetrx.com>

▶ Methodology

- Street price information is voluntarily submitted to the open access websites

Key Measures

Date of submission

Geographical locator (country, state/province, city)

Drugs/drug products purchased (product, formulation and dosage strength specific)

Amount purchased

Price paid for purchase

Web Monitoring Program

Key Measures

Number of monthly, weekly, daily mentions (product specific)

Reason for use (e.g. abuse, misuse)

Route of abuse

Outcomes (e.g. addiction, overdose, death)

Frequency of pre-identified themes

Sentinel events, new trends

StreetRx, Canada

Price per Milligram, 2012-2017

Global Mosaic: Web Monitoring, UK

Survey of Non-Medical Use of Prescription Drugs Program (NMURx)

Key Measures

Gender, age, income, geographic location, veteran and student status

General use and non-medical use of prescription drugs by active pharmaceutical ingredient and by specific product

Co-ingestants and use of illicit drugs and alcohol

Reason for non-medical use (e.g. treat pain, to get high, curiosity)

Routes of non-medical use by product endorsed

Source of drug acquisition and price paid if purchased through illegitimate channels

History of chronic and acute pain and prescription drug therapy

The Global Mosaic: How Can We Compare Apples and Oranges?

- **NMURx**
 - **Standardized survey across multiple countries**
 - **Allows direct comparisons between countries**
 - **Each country has a “fingerprint” of nonmedical use patterns**

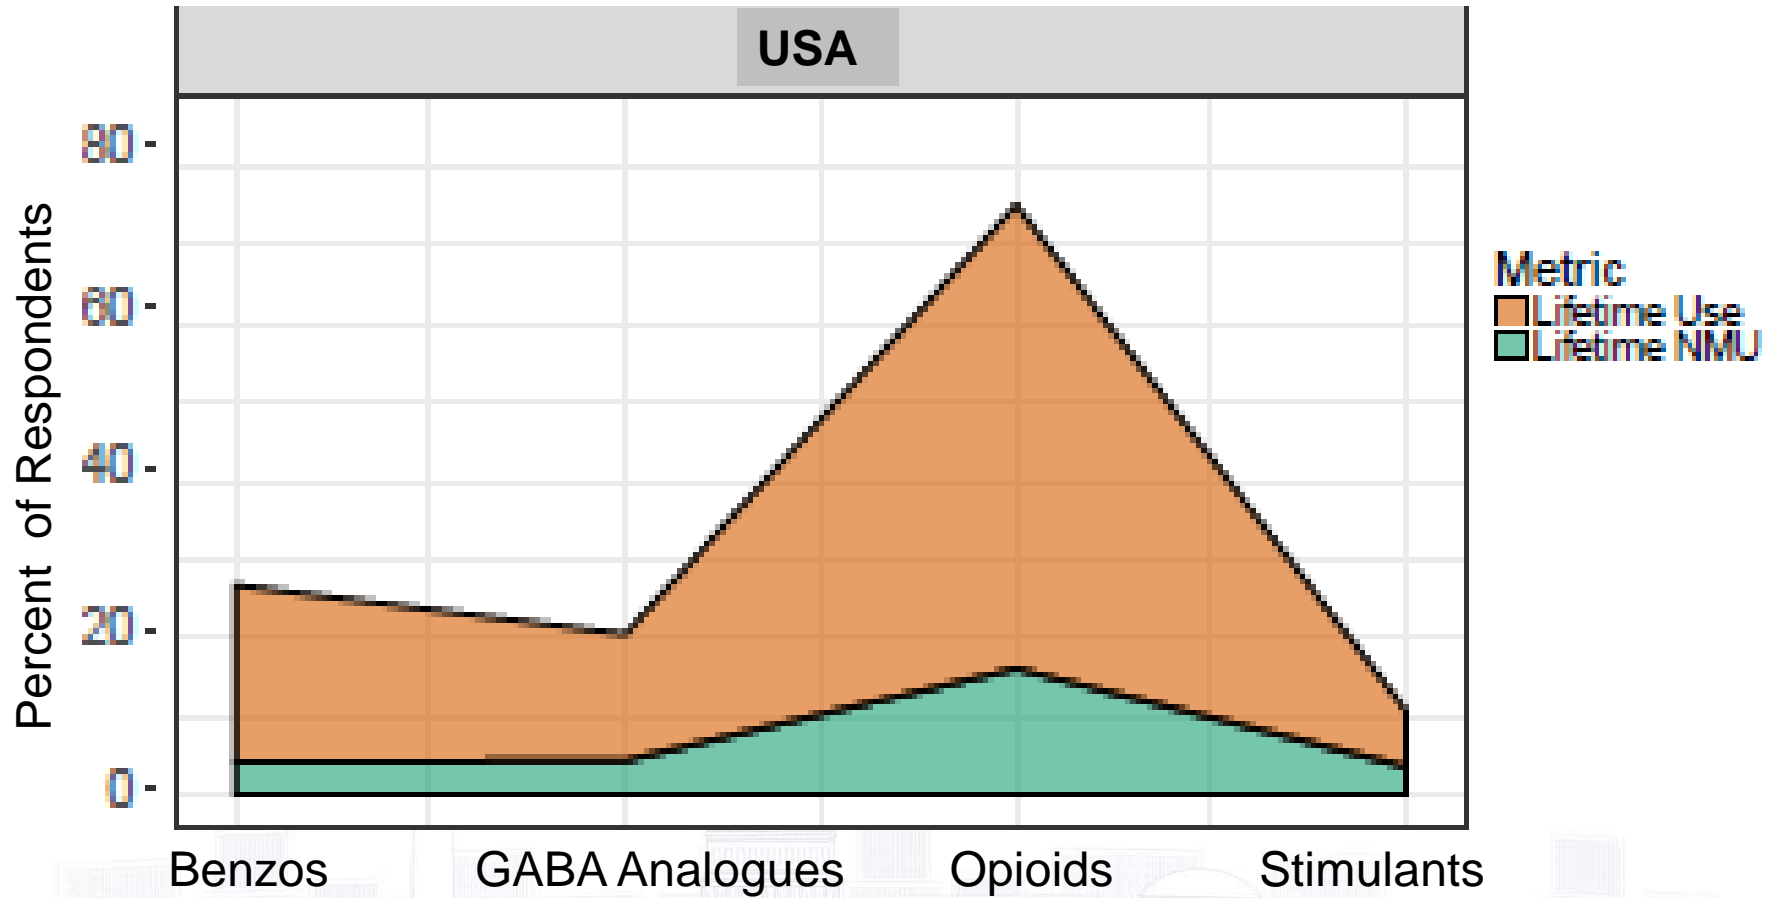

Global Mosaic: NMURx Around the World

Global Mosaic: NMURx Around the World

Global Mosaic: NMURx in Spain

Global Mosaic: NMURx Around the World

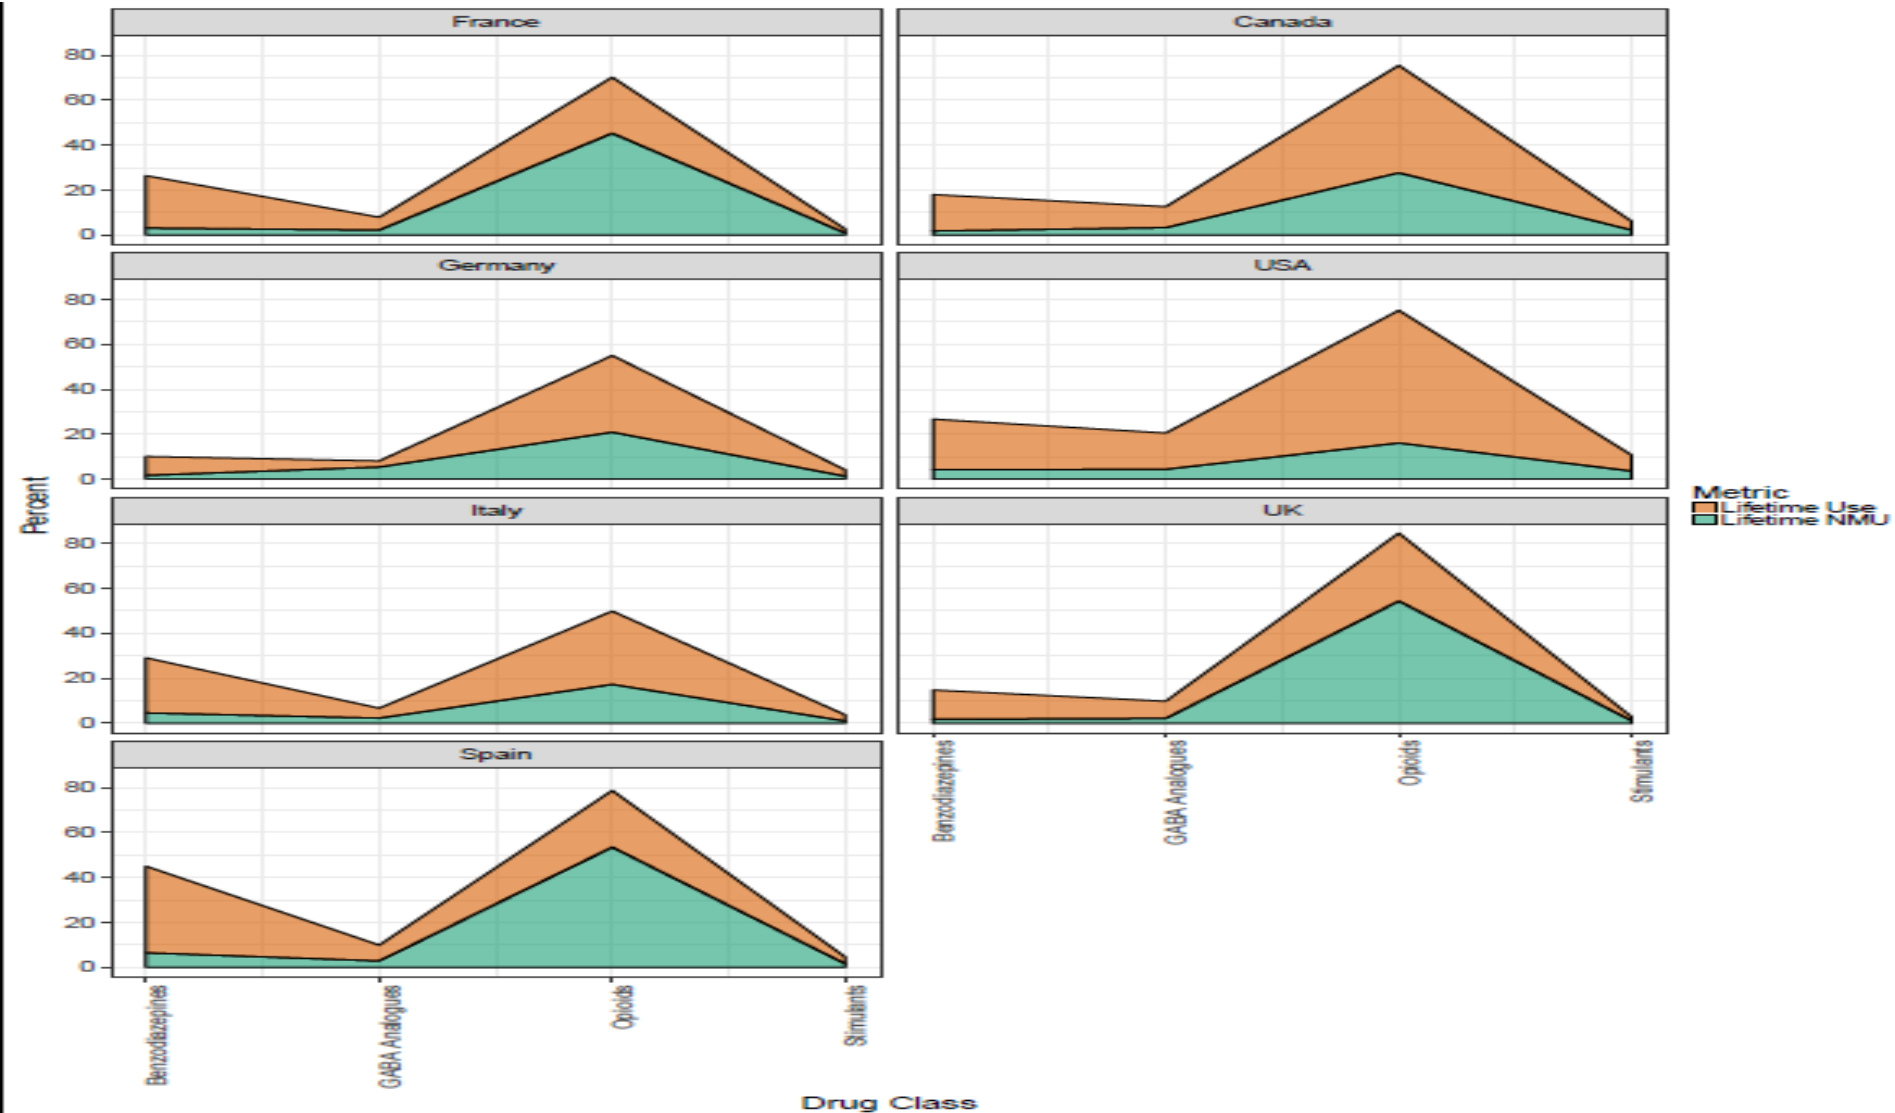

The Global Mosaic: Conclusions

- **Comparisons between countries can be difficult**
- **NMURx allows for direct comparisons**
- **Each country has a “fingerprint” of patterns of misuse**
- **Misuse of prescription opioids is most common across all countries**

Global Mosaic: NMURx Around the World

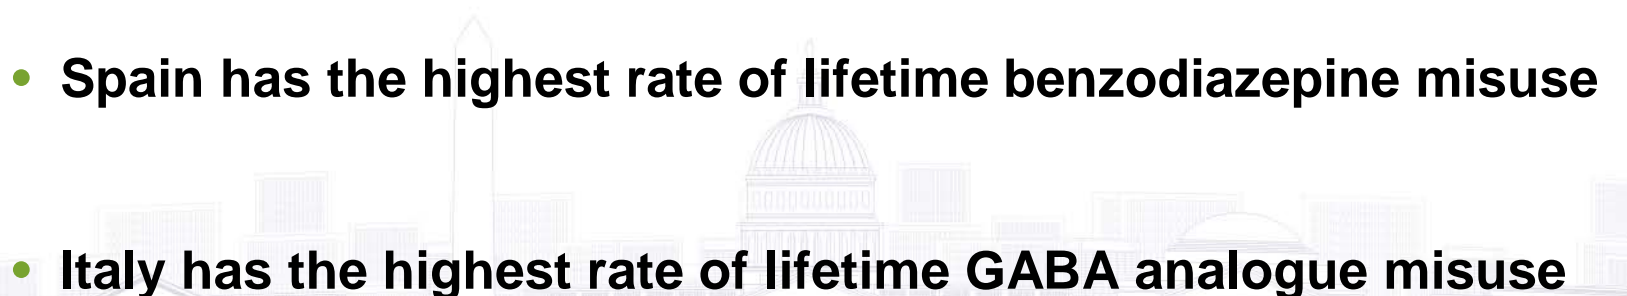

The Global Mosaic: Conclusions

- **Each component of the global mosaic provides complementary data**
- **Codeine and tramadol are highly available in multiple countries**
- **GABA analogues are commonly misused by persons who abuse drugs, most often in setting of polysubstance misuse**

The Global Mosaic: Conclusions

- **NMURx provides comparable data across countries**
 - **Opioids are most commonly misused medications across all countries**
 - **UK has the highest rate of lifetime opioid misuse, followed by Spain and France**
 - **Spain has the highest rate of lifetime benzodiazepine misuse**
 - **Italy has the highest rate of lifetime GABA analogue misuse**
-
